ABOUT ME

I love creating and shaping products. I enjoy both perfecting the user experience and understanding in detail how everything works behind the scenes. When I get involved in a project, I immerse myself completely, always striving for the best possible outcome for the people who use it.

PROFESSIONAL EXPERIENCE

Programming Coordinator and Leader (Volunteer)   **Nov 2022 - Mar 2023**
- Developed a professional project for a university assignment, creating a travel management platform.
- The project was completed in approximately 3-4 months, during which time I also learned new technologies included in the project stack.
- The project used Django with Python and employed MySQL as the local database.

Systems Administrator (Freelancer)   **Jun 2025 -**
- I developed and managed a complete POS system for a café, handling sales, inventory, and reports. I was responsible for the system's infrastructure, security, maintenance, and technical support. I implemented continuous improvements that optimised operational processes and business efficiency. The stack is based on React Native, with mySQL as the locally managed database.

EDUCATION

UNIVERSIDAD TECNOLÓGICA NACIONAL DE LA PLATA
Information Systems Engineering   **2023**

NTRA. SEÑORA DEL PERPETUO SOCORRO
Bachelor's Degree in Social Sciences   **2008-2023**

UNIVERSIDAD TECNOLÓGICA NACIONAL DE LA PLATA
British English (B2+)   **2015-2023**

CODERHOUSE
Javascript Course   **2021-2021**

LANGUAGES

Spanish   **Native**
English   **Fluid**

PROJECTS

Naftas - Precios de combustibles en tu mano (https://naftas.com.ar)
Naftas is a fuel price tracker that I created in mid-2024. It offers a wide range of features, such as viewing updated prices, saving quotes, and much more. The platform draws on various datasets, including those from the Ministry of Energy, to provide real-time price updates via the API. It receives approximately more than 20 active users per day.

Ameba - Sistema de Suscripciones para SaaS (https://github.com/francopicc/ameba)
Ameba is an application designed for SaaS companies that manage subscription-based revenue, simplifying payment processing. It supports traditional payments, cryptocurrencies, and other methods that companies can enable. It functions as a checkout.

Flama - Gestión de proyectos por IA
Flama centralises project, team and process management in one place. It enables planning, coordination and progress measurement with visual tools and automation. It helps organisations maintain clarity, control and efficiency at every stage.
